

Jobs **insider** A service of LinkedIn

LinkedIn JobsInsider is the browser companion that helps job seekers find inside connections to hiring managers and companies **wherever** they may search for jobs online.

① The LinkedIn JobsInsider is a browser companion that operates entirely in the background. It **only** activates when LinkedIn users search major job boards. For example, the user here has found an interesting job opportunity on a major online job board (Job-site.com) at UltraCorp Corporation.

② With the JobsInsider installed, a research pane automatically opens up within the browser, showing LinkedIn users the inside connections they have to employees at UltraCorp, including people in their area.

③ The LinkedIn user can then click to see employees in their network who work at the company and have indicated that they are willing to providing additional information to job seekers about the position, or refer them to the hiring manager. Job seekers can select which employee will be the most relevant to speak with and which of their own contacts they'd like to make the introduction.

What is LinkedIn Jobs?

LinkedIn Jobs combines the effectiveness of finding a job via trusted referrals with the convenience, speed and simplicity of online job boards. With LinkedIn Jobs, you can find thousands of job listings from top employers, contact people in your network to learn more about the position and company, and then upload your resume and simply apply to the position directly online. You don't need to download anything to search for jobs on LinkedIn, just visit <http://www.linkedin.com/jobs>.
